EARNINGS (LOSS) PER SHARE

The calculation of earnings (loss) per share is based on profit (loss) after taxation and the weighted average number of ordinary shares in issue during the period. The weighted average number of shares in issue for the period under review vas 94/39542 (June 2004: 94/28406). On a diuted basis the fully converted weighted average number of shares is 94/48/1028 (June 2004: 94/2463428). Headline earnings (loss) is arrived at after excluding the net surplus on disposal of propertyplant and equipment as reflected Headline earnings (loss) is an in note 3.

Chairman's Statement

The results for the six months ended 30 June 2005 are acceptable given the trading conditions and exchange rates in which the group operated. Revenue for the six months was up 23% on the comparative period in 2004. Gross profit however dropped from 20% to 15% of revenue, which is as a result of continuing losses on the contracted export of product to the United States and discounting in the face of fierce competition in our domestic and U.K. markets. Exports as a percentage of sales were 56%, up 5% from the comparative period, as were export volumes up by 9%. Margins were also affected by the strengthening of the Rand, earning on average R6,24 for each U.S. Dollar of exports as compared with June 2004's average rate of R6,60. Fortunately we benefitted from a strengthening Rand against the Euro in this period otherwise gross profit. Net ans R32,8 million as compared to R25,7 million this despite a R15.6 million drop in gross profit. Net asset value per share has increased by 25 cents since the beginning of the year.

The most pleasing aspect of these results is the positive cash flow of R106,7 million that was generated in the six months despite capital expenditure of R151, million in the period. The working capital was reduced and as a result trade cycle days were down from 133 days to 83 days at the end of June. The inventory reduction of R116,2 million, was the single most important factor in the improvement in the working capital was reduced and as a result trade cycle days were down from 133 days to 83 days at the end of June. The inventory reduction of R116,2 million, was the single most important factor in the improvement in the working capital cycle. On the contrary debros did increase but this was largely due to exceptionally high revenue of R427,8 million in June. Subsequent to half year the cash flow has continued to improve with further reductions in borrowings. We have still not enjoyed the full working capital benefits of our German assembly plant as high volumes stress the supply chain and increased competition erodes the margin expectation. During the next six months we expect a further reduction in borrowings of over R100 million. Total overheads of R26,1 million are 1% lower than the comparative period despite the substantial increase in volumes and sales. We have seen some small cost reduction benefits from the Project. 100 Plus cost reduction programme in this period but expect increased savings in overheads and product costs to flow from this project in the next 12 to 18 months as the various initiatives are implemented.

Another noteworthy feature of these results is the excellent work done by our Treasury team in managing foreign exchange losses down from R16,3 million last June to R1,1 million in this period.

During the last two months we have been able to see the implementation of the new arrangements with our strategic alliance partner, John Deere Construction and Forestry Company (Deere). Manufacturing part of the range of our Articulated Dump Trucks (ADTs) has commenced in Davenport U.S. and the first back of Tractor Loader Backhoes (TLBs) being assembled and partially manufactured have come off our Richards Bay production line. The first consignment of Front End Loaders (FELs) kits imported from Deere is now being assembled in Richards Bay. This production in Richards Bay will substantially reduce our overall manufactured cost of these products and will improve our gross margin. The setting up of the ADT plant in the U.S. allows us to make a margin on the kits manufactured in Richards Bay and exported to this facility and at the same time reduces losses that we are making on the sales of completed units to the U.S. We expect these three manufacturing processes to be completely bedded down by 31 December 2005. The migration of manufacturing between South Africa, the U.S. and our German facility should improve profitability, reduce manufacturing between South Africa, the U.S. and our German facility should improve profitability, reduce manufacturing costs and currency dependency as well as improving our responsiveness to customers. Management's efforts to reduce product and operating costs continue unabated.

Our Southern African Sales and Distribution operation which forms the backbone of the Group, continues to be profitable and at the forefront of the industry.

I am pleased to report that the entire Bell team see the progress being made and have a combined clear resolve to achieve the stated targets set for cost reduction, efficiency and quality improvements. The sustainable benefits of our Project 100 Plus programme and more importantly our strategic alliance with Deere we expect to flow substantially to the bottom line during 2006.
